QUESTION THREE:

A. Data that is not located in the user's local system. Required transmission of data between the computer WITH the information and the local system that does not have it.

B. The feature of data being stores in different locations rather than in one local system. This allows for faster data access.

C. An application Program interface allows for communication between different softwares and systems using a set of rules. It is a connection that relays requests and retrieves information from the desired system.

D. Javascript Object Notation is a readable script of information in a “key-value” pair format. Each key and value holds important information used in data exchange and storage. This allows ease of access for information in an easy-to-read format.

QUESTION FOUR:

Watching television shows via streaming requires access to a remote server that host the shows. By breaking down the information and sending it to our local system in real time, we can stream the show without waiting for the whole episode to fully download. It is a real-time access that requires information from an external server to work.
